

● CUSTOM AI SYSTEMS & PROCESS AUTOMATION

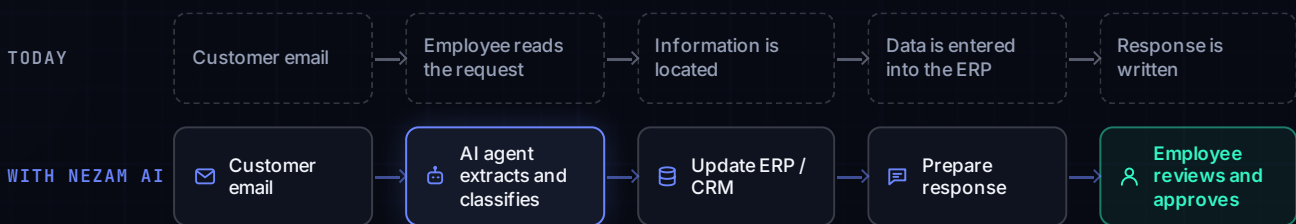

AI automation for German companies

We develop secure AI assistants and automate business processes, integrated with your existing ERP, CRM and data systems.

- ✓ GDPR-ready
- ✓ Cloud, private cloud or on-premises
- ✓ Integration with existing systems
- ✓ From pilot to production

FIG. 1 · WORKFLOW OF ONE CUSTOMER EMAIL

What can we automate?

AI handles research and routine work. Decisions affecting customers, finances or legal matters remain with your employees.

[Live demo of this workflow](#) ➔

01 · THREE CLEAR OFFERINGS

AI solutions for your company

Q	KNOWLEDGE	PROCESSES	SYSTEMS
Enterprise AI Assistant A secure internal AI assistant that can search your documents, policies, contracts and company data and answer questions. Microsoft 365 SharePoint PDF / Word ERP / CRM APIs	AI Process Automation Automate repetitive business processes, from incoming emails and documents to data capture and customer request processing. Email Documents Extraction Classification Human Approval	Custom AI Integration We integrate modern AI directly into your existing software landscape without requiring you to replace current systems. ERP CRM Microsoft 365 REST APIs SQL	

02 · USE CASES

Where AI can help immediately

The starting point is always a concrete business problem, not a model name.

Email automation Pre-sort inboxes and prepare response drafts. → less manual triage	Document processing Read and validate PDFs, forms and contracts. → end-to-end processing	Internal knowledge search Find answers in approved company sources. → knowledge available faster	Customer service Classify requests and suggest context and next steps. → faster response
ERP/CRM processes Update records after defined approvals. → fewer system handoffs	Data extraction Convert unstructured content into validated fields. → usable data	Reporting Prepare data from multiple sources in a traceable way. → less copying	Custom AI agents Execute multi-step tasks and escalate at defined limits. → controlled automation

03 · DISCOVERY SPRINT

Start with an AI Discovery Sprint

Before a larger project begins, we identify and validate the use case with the strongest demonstrable value.

WE ANALYSE

- existing processes
- software landscape
- available data
- automation potential
- integrations
- security and data protection
- technical feasibility

FIXED DURATION

2 weeks

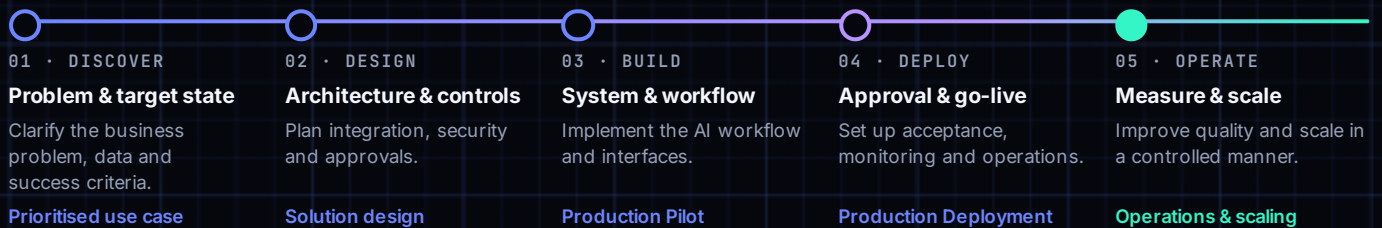

Analysis and validation

YOU RECEIVE

- prioritised AI use case
- solution architecture
- integration concept
- implementation plan
- effort estimate
- measurable success criteria

04 · DELIVERY

From problem to production system

A clearly scoped production pilot typically targets a 6–8 week timeframe. Scope, data access, integrations and approvals are determined during the Discovery Sprint.

05 · SECURITY & DEPLOYMENT · FIG. 2 YOUR SYSTEM BOUNDARY

AI for sensitive company data

EU data residency

Architecture options for processing and storage within the EU.

Private Cloud

Dedicated environments with clear system boundaries.

On-Premises

Operation in your infrastructure when data must remain there.

INTEGRATION INSTEAD OF RIP AND REPLACE

We connect AI through existing interfaces, databases and identity systems.

- Microsoft 365
- SharePoint
- ERP
- CRM
- REST APIs
- SQL
- Document repositories
- Identity & Access
- Internal business applications

Role-based access

Integration with roles, service accounts and existing identity systems.

Human Approval

Human approvals for consequential workflow actions.

Audit Logging & Isolation

Traceable actions and isolated data contexts.

We do not promise blanket compliance. We document data flows, controls and responsibilities for the specific use case. GDPR-ready means: Data minimisation, deletion concepts, access control and data processing agreements are considered in the specific architecture. The legal assessment depends on the use case.

START WITH NO OBLIGATION

Free 30-minute AI consultation

Show us a process that currently costs time or money. Together, we will assess whether and how AI can automate it effectively.

- ✓ Technical conversation instead of a sales script
- ✓ Initial assessment of value and feasibility
- ✓ Clear next steps, or an honest no
